Python Financial Library: Installation, Functions, Examples

Python is one of the most popular programming languages, especially when dealing with vast amounts of financial data. Whether you're developing a standalone app for finance or applying analytical methods to financial data, Python offers numerous solutions. While tools like **Google Sheets and Excel add-ons** cater to those less familiar with coding, we've made significant efforts to enhance the lives of developers by providing EODHD's official library for API for Python to pull financial statement data and many more. In this article, we will cover installation, all functions, and provide examples, catering to developers in the finance industry who seek the best solutions for various tasks, including scraping financial data from several sources.

Quick jump:

1. Official EODHD Python Financial Library installation >
2. EODHD API access activation: free and payed options >
3. Example: End of the day historical stock market data >
4. List of the available functions >
5. More on EODHD API >

Official EODHD Python Financial Library installation

The library grants access to all the key features to work with stock market API in Python. You can find the library with it's updates on our **Github page**.

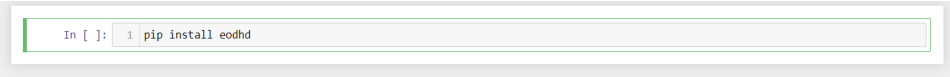
Financial Excel Add-on For Historical, EOD, Intraday & Fundamental data. Video tutorial

QUICK START with our Financial Data APIs

1. Installing EODHD library. Start with the following command:

```
python3 -m pip install eodhd -U
```

See the screenshot:



Wait until library will be installed – it will be shown when [*] will change to [1].

2. **Importing Required Libraries**. Next, let's import EODHD library for accessing EODHD API's functions:

```
from eodhd import APIClient
```

```
import pandas as pd
```

Python Financial Library is installed now.

3. **Accessing the EODHD API** – to access the EODHD API, we need to create an instance of the "APIClient" class and pass it our API key. In this example, we will use the demo API key provided by EODHD, but in a real application, you should use your registered API key.

```
api = APIClient("<Your_API_Key>")
```

or:

```
import os

api_key = os.environ.get("<Your_API_Key>")
api = APIClient(api_key)
```

or via config file:

```
# config.py

API_KEY = "<Your_API_Key>"

# main.py
import config as cfg
api = APIClient(cfg.API_KEY)
```

> *There is also an unofficial, community-built Python library for EODHD's API by Lautaro Parada. The library and its description can be found on the **GitHub page**.*

Next, we are going to activate EODHD's API key to get an access to stock data API in Python.

EODHD API access activation: free and payed options

1. You can start with "**DEMO**" API key to test the data for a few tickers only: **AAPL.US**, **TSLA.US** , **VTI.US**, **AMZN.US**, **BTC-USD** and **EUR-USD**. For these tickers, **all of our types of data (APIs)**, including **Real-Time Data**, are available without limitations.
2. Register **for the free plan** to receive your API key (limited to 20 API calls per day) with access to **End-Of-Day Historical Stock Market Data API** for any ticker, but within the past year only. Plus a **List of tickers per Exchange** is available.
3. We recommend to explore **our plans**, **starting from $19.99**, to access the necessary type of data without limitations.

Explore Plans Including the API

The library is now ready for use. Next, we recommend exploring our **Academy section** and specifically the **article** "Download EOD, Intraday, and Real-time Prices for Any Cryptocurrency with Python Simply" by **Michael Whittle** to fully understand what our API offers.

Example: End of the day historical stock market data

Lets retrieve End of the day historical stock market data:

```
resp = api.get_eod_historical_stock_market_data(symbol =
'AAPL.MX', period='d', from_date = '2023-01-01', to_date
= '2023-01-15', order='a')
print(resp)
```

The function will return the following JSON respond:

	date	open	high	low	close	adjusted_close	volume
0	2023-01-03	130.28000000	130.90000000	124.17000000	125.07000000	124.21630000	112117500
1	2023-01-04	126.89000000	128.66000000	125.08000000	126.36000000	125.49750000	89113600
2	2023-01-05	127.13000000	127.77000000	124.76000000	125.02000000	124.16660000	80962700
3	2023-01-06	126.01000000	130.29000000	124.89000000	129.62000000	128.73520000	87754700
4	2023-01-09	130.47000000	133.41000000	129.89000000	130.15000000	129.26160000	70790800
5	2023-01-10	130.26000000	131.26000000	128.12000000	130.73000000	129.83770000	63896200
6	2023-01-11	131.25000000	133.51000000	130.46000000	133.49000000	132.57880000	69458900
7	2023-01-12	133.88000000	134.26000000	131.44000000	133.41000000	132.49940000	71379600
8	2023-01-13	132.03000000	134.92000000	131.66000000	134.76000000	133.84020000	57809700

All the parameters for this function are listed and described **here**.

List of the available functions

Function & description	Code examples
Live (Delayed) Stock Prices and Macroeconomic Data (**doc**)	`resp = api.get_live_stock_prices(date_from = '2020-01-05', date_to = '2020-02-10', ticker = 'AAPL.US')` `print(resp)`

Bonds Fundamentals (**doc**)	`bonds = api.get_bonds_fundamentals_data (isin = "US36166NAJ28")`
	`bf = pd.DataFrame(bonds)`
	`print(bf)`

Intraday Historical Data (**doc**)	`d_by_datetime = api.get_intraday_historical_data(symbol="BTC-USD.CC", interval="1m", from_unix_time='1637982000', to_unix_time="1637982900")` `print(d_by_datetime)`
Historical Dividends (**doc**)	`hd_by_datetime = api.get_historical_dividends_data(ticker = "GS", date_from = "2020-12-10", date_to = "2021-04-`

		10") hd_m = pd.DataFrame(hd_by_datetime) print(hd_m)
	Historical Splits (**doc**)	sd_by_datetime = api.get_historical_splits_data(ticker = "MS", date_from = "2000-01-01") sd_m = pd.DataFrame(sd_by_datetime) print(sd_m)
	Bulk API for EOD, Splits and Dividends (**doc**)	eod_splits_dividends_extended = api.get_eod_splits_dividends_data (type = "dividends", date = "2020-12-10", symbols = "AAPL.US") esd_m = pd.DataFrame(eod_splits_dividends_extended) print(esd_m) # for Dividends eod_splits_dividends_extended = api.get_eod_splits_dividends_data (type = "splits", date = "2020-12-10", symbols = "AAPL.US") esd_m = pd.DataFrame(eod_splits_dividends_extended) print(esd_m)# for Splits
	Calendar. Upcoming Earnings, Trends, IPOs and Splits (**doc**)	earnings_trends = api.get_earning_trends_data (symbols = "AAPL.US, MS") et = pd.DataFrame(earnings_trends) print(et) # for Earnings Trends Data up_earnings_extended = api.get_upcomi

		``ng_earnings_data (from_date = "2020-12-10", to_date = "2021-04-10", symbols = "AAPL.US") ue_m = pd.DataFrame (up_earnings_extended) print(ue_m) # for Upcoming Earnings Data up_ipos_extended = api.get_upcoming_IPOs_data (from_date = "2020-12-10", to_date = "2021-04-10") ui_m = pd.DataFrame (up_ipos_extended) print(ui_m) # for Upcoming IPOs up_splits_extended = api.get_upcoming_splits_data (from_date = "2020-12-10", to_date = "2021-04-10") u_split_m = pd.DataFrame (up_splits_extended) print(u_split_m) # for Upcoming Splits

End of the Day Historical Stock Market Data (**doc**)	`resp = api.get_eod_historical_stock_market_data(symbol = 'AAPL.MX', period='d', from_date = '2023-01-01', to_date = '2023-01-15', order='a')` `print(resp)`

List of supported Exchanges (**doc**)	`l_e = api.get_list_of_exchanges()`
	`list_exchages = pd.DataFrame(l_e)`
	`print(list_exchages)`

Insider Transactions (**doc**)	`insider_extended = api.get_insider_transactions_data(date_from = "2020-12-10", date_to = "2021-04-10", limit = "200")`
	`ie_m = pd.DataFrame(insider_extended)`
	`print(ie_m)`

Macro Indicators (**doc**)	`indicator_extended = api.get_macro_indicators_data (country = "USA", indicator = "real_interest_rate")`
	`indicator_m = pd.DataFrame(indicator_extended)`
	`print(indicator_m)`

Exchanges API. Trading Hours, Stock Market Holidays, Symbols Change History (**doc**)	`exchange_extended = api.get_details_trading_hours_stock_market_holidays (code = "US", from_date = "2023-10-15", to_date = "2023-11-15")`
	`e_m = pd.DataFrame (exchange_extended)`
	`print(e_m) # for Trading hours and Stock market holidays`

	`symbol_extended = api.symbol_change_history(from_date = "2022-07-22", to_date = "2022-08-10")`
	`s_m = pd.DataFrame(symbol_extended)`
	`print(s_m) # for Symbol change history`

Stock Market Screener (**doc**)	`screener_extended = api.stock_market_screener (filters = [["market_capitalization",">",1000]], limit = "100", offset = "200")`
	`screener_m = pd.DataFrame(screener_extended)`
	`print(screener_m)`

Technical Indicator (**doc**)	`resp = api.get_technical_indicator_data(ticker = 'AAPL.US', function = 'avgvolccy', period = 100, date_from = '2020-01-05', date_to = '2020-02-10', order = 'a', splitadjusted_only = '0')` `print(resp)`
Historical Market Capitalization (**doc**)	`resp = api.get_historical_market_capitalization_data(ticker = 'AAPL.US', from_date = '2023-01-01', to_date = '2023-01-15')` `print(resp)`

Fundamental Data: Stocks, ETFs, Mutual Funds, Indices and Cryptocurrencies (**doc**)	`resp = api.get_fundamentals_data(ticker = "AAPL")`
	`fundamental = pd.DataFrame(resp)`
	`print(fundamental)`

EODHD.COM would like to remind you that our service DOES NOT provide any financial services. EODHD.COM provides only data APIs, all data contained in this website and via API is not necessarily real-time nor accurate. All CFDs (stocks, indices,

mutual funds, ETFs), and Forex are not provided by exchanges but rather by market makers, and so prices may not be accurate and may differ from the actual market price, meaning prices are indicative and not appropriate for trading purposes. We are not using exchanges data feeds for the pricing data, we are using OTC, peer to peer trades and trading platforms over 100+ sources, we are aggregating our data feeds via VWAP method. Therefore EOD Historical Data doesn't bear any responsibility for any trading losses you might incur as a result of using this data. EOD Historical Data or anyone involved with EOD Historical Data will not accept any liability for loss or damage as a result of reliance on the information including data, quotes, charts and buy/sell signals contained within this website. Please be fully informed regarding the risks and costs associated with trading the financial markets, it is one of the riskiest investment forms possible. EOD Historical Data does not give any warranties (including, without limitation, as to merchantability or fitness for a particular purpose or use). Without limitation to this clause, EOD Historical Data does not warrant that access to the Website will not expose the User to viruses or other harmful items and no assurance can be given that the Website or any linked website will not harm or cause loss to the User, or the User's computer or network.
